

Professional And Vocational List Builder Data Documentation

1 Introduction

List Builder data is composed of three comma-separated (CSV) text files. Fields and the data layout are displayed below.

The files generated are named the following:

1. **LIC###.#.txt** - general licensee information
2. **LCL###.#.txt** - license class information
3. **LNМ###.#.txt** - legal name information

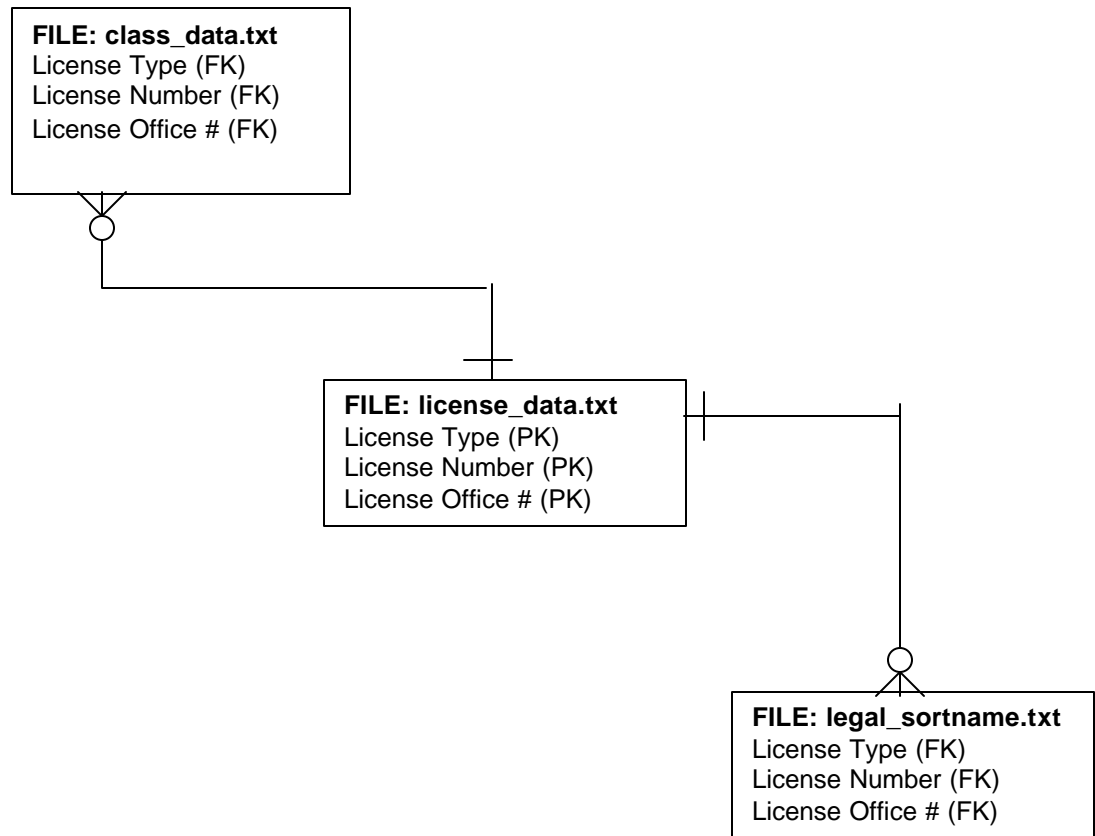

Only the most current amalgam of information for licensees is provided. No attempt is made to provide an association between licensees and the changes to the attributes of the licensee's record.

2 Table Relationships

Tables are related using a combination of three fields: (a) License Type, (b) License Number, and (c) License Office Number. For example, let's say Jonah Smith (fake licensee) has a license type of RN, a license number of 1255, and a license office number of 0. For License Office Number, the default value is 0. Records in class_data.txt and legal_sortname.txt are optional, as not all licensees will have records in those tables. All records and information that have this license type, license number, and license office number combination are associated with Jonah Smith in some way.

See the Figure 1 on the next page for a visual representation of how the files relate.
